

Window Object

It represents the window of our browser.

It is the owner of all the global properties of the Javascript global variables and objects.

this keyword

refers to the object it belongs to

When it is used outside a method/fn, the owner is the global object {window object}

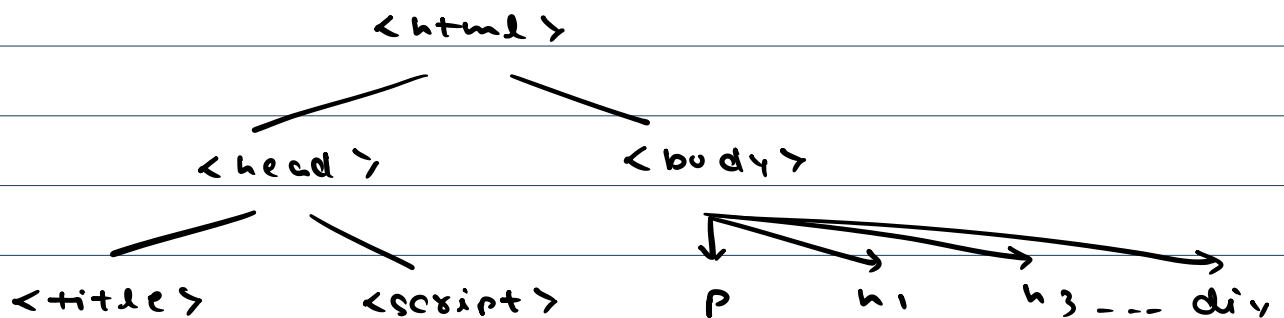

When it is used in a fn, it refers to the owner of the fn which is the global object {window object}

When it is used with event handlers, it refers to the element that received the event.

setTimeout() method

It is used to a timer for the execution of a specific piece of code.

DOM Manipulation

It stands for Document Object Model.

It is a tree of objects of the HTML elements.

It also defines HTML tags/elements as objects.

HTML can be manipulated using DOM.
