Git and Github

version control
System
(VCS)

→ web based hosting
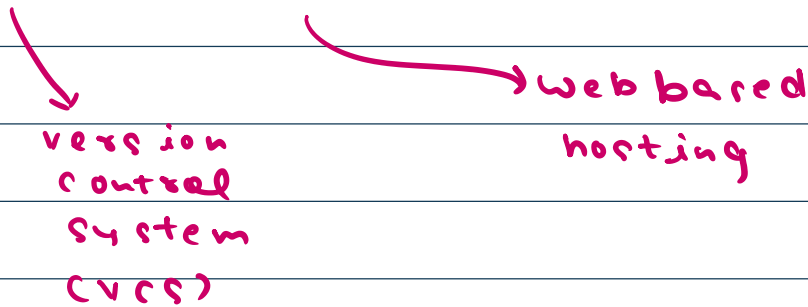

To Store the data
↓
Folders ⟶ Directory ⟶ Repository

Step 1:- Create a Repo on github.com

Step 2:- Copy the folder locally {clone}

git clone <repo-url>

Step 3:- Create a file Hello.txt and Some
data into it.

Step 4:- Add file to the staging area

git add <fileName>

Step 5:- Commit the changes → "my message"

git commit -m "added a salutation"

Step 6:- Publish the changes (Push)

git push -f origin master

git commit -am "my msg"

git commit -am "my msg"
$\quad\quad\quad\quad\quad\quad$ └→ all the files

For staging multiple files

1) git add <file1> <file2> <file3>

2) git add . ⇒ It will add all the files

Git Branching
